WHO WE ARE

CRAFT HUB RWANDA

CRAFT HUB RWANDA is a professional software development company based in Rwanda. We work with institutions and businesses to deliver custom digital solutions—not only education technology, but also tailored systems, integrations, and products built for real-world use.

Vision

A trusted Rwandan software company known for dependable digital solutions that improve how organizations operate and serve their communities.

Mission

Understand operational challenges, design clear software solutions, and deliver quality systems that simplify work and strengthen transparency.

CORE SERVICES

- **Custom software development** — applications aligned to your workflows and reporting needs
- **Web & application development** — secure platforms for users and administrators
- **Systems integration** — connected software, data, and communication environments
- **Database design & development** — reliable records and reporting foundations
- **Customization & implementation** — adaptation and structured rollout support
- **Installation & technical solutions** — deployment and setup assistance

VALUES

Innovation · Reliability · Quality · Simplicity · Practical problem-solving · Customer focus

FEATURED PRODUCT

e-KOFI

IN ACTIVE DEVELOPMENT

e-KOFI is an education technology product we are building to replace cash-based school canteen payments with digital student wallets—improving convenience, traceability, and oversight for parents, students, schools, and canteen operators.

Planned capabilities

- Student digital wallets and parent top-ups
- Cashless payments at participating school canteens
- Fingerprint verification for student identification at payment
- Transaction records and tools for administrators and merchants

Intended flow: Parent tops up wallet → student purchases at canteen → fingerprint verification → digital transaction record.

e-KOFI capabilities above reflect product vision and current development. They are not a claim of full commercial deployment until formally launched with a partner institution.

WHY CRAFT HUB RWANDA

- Software focused on real operational outcomes
- Understanding of local institutional context in Rwanda
- Customer-focused delivery and clear scope
- Flexible, scalable solutions—from custom builds to in-house products

OUR APPROACH

Discover the problem → design for daily use → build and test iteratively → implement and improve with stakeholders.
